

Who the paths run through

12,905 relationship chains · 83,441 distinct people · from reports/path-chains.tsv · 2026-09-16

What this does not say, and an earlier version of it did

The first cut of this report sorted people into trunk / junction / corridor by how many distinct step-depths they were reached at, on the reasoning that several depths meant several branches converging. That was measuring the searcher, not the graph. Geni returns

one shortest chain per destination per kind

, and every chain starts at the same person, so depth is distance from that root and is near enough fixed:

77,596	appear at exactly one depth	one shortest path each
4,646	vary only between blood and in-law	two searches, not two branches
1,199	vary within a single kind	and mostly by 1-3 steps

So there is no hub-versus-trunk distinction to be had here. What follows ranks by

reach

instead.

Reach, and why it is worth having

Reach

is the number of destinations whose chain passes through a person. It is a fact about the shortest-path tree rather than the underlying graph — and that is what makes it useful. A high-reach person is a

cut vertex on the routes we actually have

: if their record is wrong, or they come unconnected, every path behind them goes with them. Berengária of Portugal carries a tenth of everything found.

6,184

people appear on both a blood and an in-law chain, which is the one split the data genuinely offers.

By reach

top 45 of 83,441

The opening names are the account owner's own line and are unavoidable — every path leaves through them. They are here because the top of this list is the sanity check on the whole harvest: if these are wrong, every chain is wrong.

By reach, eight steps out and beyond

82,773 people

The same ranking with the immediate family dropped, which is the nearest honest version of the question "who are the super-connectors". These are the people the searcher routes through most once it has left the household: the Danish and Portuguese royal line at twenty-five to twenty-nine steps, and the Gyntersberg and Flemming families closer in.
